AB - J06158002 The tape consists of a base sheet and a self-adhesive layer formed on one side of the base sheet. One or both of the base sheet and self-adhesive layer contain an anti-fungus agent consisting of isothiocyanic acid ester clathrated with cyclodextrin.

- The isothiocyanic acid ester includes allyl isothiocyanate, methyl isothiocyanate, ethyl isothiocyanate, n-propyl isothiocyanate, n-butyl isothiocyanate, isobutyl isothiocyanate, isoamyl isothiocyanate, phenyl isothiocyanate, benzyl isothiocyanate, etc. and most pref. is allyl isothiocyanate.
- It is extracted from wasabi or mustard or synthesised by decomposing a reaction prod. of amine and carbon disulphide with silver nitrate.
- Pref. cyclodextrin is beta-cyclodextrin.
- The clathrate is obtd. by mixing cyclodextrin in powder with isothiocyanic acid ester in liq..
- The anti-fungus agent is contained in 0.5 to 15, (pref. 1 to 10) pts. wt. per 100 pts. wt. of resin. The base sheet includes foamed or non-foamed polystyrene, polypropylene, polyethylene, PVC and PVA films, paper, cloth and metal foil. The self-adhesive is made from rubber, acrylic resin, vinyl resin, silicone, etc..
- ADVANTAGE - The antibacterial self-adhesive tape is attached to inside of food containers such as lunch boxes and releases vapour of anti-fungus agent slowly. (Dwg.0/4)
